

# Oracle eBusiness R12.x APPS TECH Developer

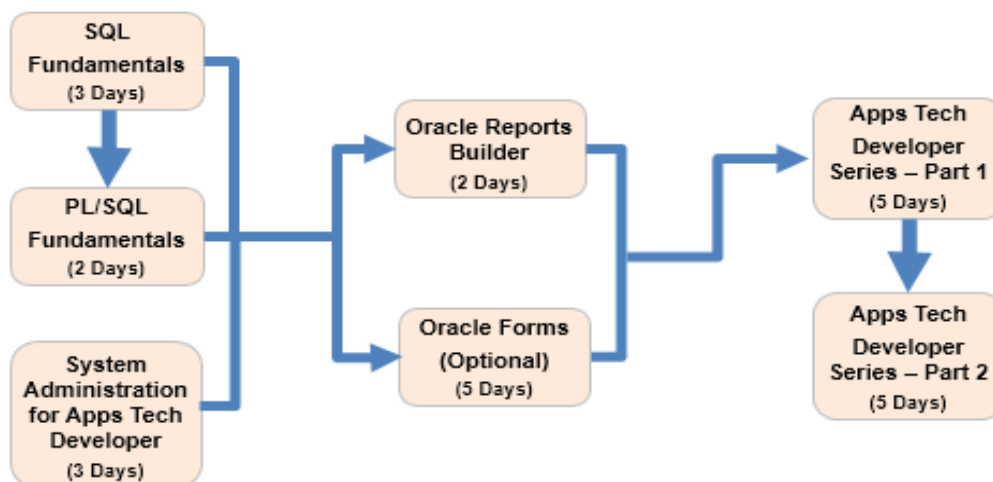

## TRACK DESCRIPTION

---

The Oracle eBusiness APPS Tech Development Track course is designed for individuals with zero or Oracle Developer Tools background to acquire required skills for an Oracle eBusiness APPS Tech Developer. The first part of the Oracle Apps Tech Dev Series is an in-depth discussion of the e-Business System and Security Architectures, File System and Application Schema, and Application Object Library from an application developer perspective. Concurrent Programs and Reports Development in Oracle eBusiness include step-by-step examples of actual development of concurrent programs, customization of standard reports and a new report using Oracle Reports and BI Publisher and best practices are discussed thoroughly. Part 2 covers the Application Program Interfaces (API's) and development of interface scripts using Oracle Standard API's. Included in this course also is the personalization (customization without touching the source code) of Standard Oracle EBS Forms and Web-based UI.

# Oracle eBusiness R12.x APPS DBA

## TRACK DESCRIPTION

---

The Oracle eBusiness APPS DBA Track is designed for individuals with Oracle basic database administration background to acquire required skills for an Oracle eBusiness APPS DBA. The track is applicable for customers who have implemented Oracle E-Business Suite Release 12.x Suite. The track covers how to go about installing and maintaining an Oracle E-Business Suite Release 12.x system. Standard installation type is covered in detail. Maintenance topics include a detailed examination of the standard tools and utilities, and an in-depth look at patching an Oracle E-Business Suite system. The track includes practical experience in using the features and functionality of Oracle eBusiness System Administrator in administering and managing the Oracle eBusiness Suite. In addition, configuration and maintenance of an Oracle E-Business Suite through Oracle Applications Manager is discussed as well as handling day-to-day system administrator tasks. After this course, students will be able to make informed decisions about how to install an Oracle E-Business Suite system that meets their specific requirements, and how to maintain the system afterwards. Included in the track is an in-depth discussion on the system administration from an Oracle EBS Apps DBA perspective. The extensive hands-on practices include performing an installation on a Linux system, navigating the file system to locate key files, running the standard maintenance tools and utilities, applying patches, carrying out cloning operations, basic performance tuning, backup and recovery.
